Precision for health

Spot-check Vital Signs Monitor

We make taking vital signs EASY

seca mVSA

Where simplicity meets accuracy

We realize that the working environment for medical staff is complex. This is precisely why we developed the seca mVSA, a spot-check monitor that simplifies and quickens the routine task of capturing patient vitals (blood pressure, temperature, pulse rate, SpO₂) in less than 60 seconds.

- + **EASY, quick and accurate**
- + **Blood pressure averaging**
- + **seca scale connectivity**
- + **EMR-validated and certified**
- + **Incredible price-point**
- + **World-class service program**

Optional rolling stand seca 475 for mobile use

Component options

Blood pressure cuffs
(sizes XS-XXL)

Temperature probe
(oral/axillary)

Temperature probe
(rectal)

Masimo SET® SpO₂
finger clip

All measurements at a glance on the easy to operate 7" touchscreen monitor.

Long lasting lithium-ion battery enables up to 150 measurements on one single charge.

Store up to 70,000 vital signs measurements in the large internal memory for later processing.

Durable BP cuffs enhanced with metal plate and cuff stitching around the exterior.

EASY, quick and accurate

The seca mVSA is easy-to-use and self-explanatory with little to no training required for nursing staff. Just turn it on, start the measurement and within 60 seconds blood pressure, temperature, pulse rate and SpO₂ are shown at a glance.

Record **blood pressure** with the unique inflation or deflation mode with a push of only one button in less than 20 seconds.

The **temperature** measurement starts automatically when the probe is used (oral/axillary or rectal).

The patient's **pulse rate** is always measured simultaneously while using blood pressure measurement or pulse oximeter.

Measure **blood oxygen levels** with a Masimo SET® sensor.

seca EQ BP™

True screening of hypertension with configurable seca EasyQuick Blood Pressure (EQ BP™) average mode*: take 6 readings automatically in 30 minutes. A single reading can be taken in under 20 seconds with the comfortable and unique blood pressure inflation mode.

* coming soon

Blood pressure can be determined quickly and gently using the inflation measurement method.

Avoid the “white coat effect” and capture blood pressure accurately with configurable seca EQ BP™ averaging.

Seamless scale connectivity

The seca mVSA can gather height and weight measurements from EMR-validated seca scales and measuring stations, thereby improving and standardizing base parameter acquisition.

EMR-validated and certified

Eliminate transcription errors and increase patient safety with direct transmission of measurements into the electronic medical record (EMR) via Cerner CareAware VitalsLink® or HL7. Similar integration solutions are provided for a wide range of EMR systems:

Epic **athenahealth**
eClinicalWorks **Cerner**

Future safe with seca service

- + Advanced replacement service can immediately provide you with an equivalently configured unit to ensure minimal downtime
- + Priority access to latest seca software updates and upgrades
- + Optimize your investment with a convenient one-, three- or five-year contract
- + Outstanding Engineering Technicians dedicated to our nationwide customers. Operating times: 9-7 EST, 8-6 CST, 6-4 PST

Toll-free service hotline: +1 800 542 7322
